

The attached pesticide data was obtained through California's Pesticide Portal
<http://calpip.cdpr.ca.gov/cfdocs/calpip/prod/main.cfm>.

This portal contains all pesticides applied by County by year. To obtain this data, I made an online query for pesticide application in Tuolumne County on forest related crops and pulled the data for 2000-2005. At the time the original data was obtained, the 2006 data was not yet on-line. The data was then sorted for the grower id for Sierra Pacific Industries (grower id code including numbers 290011). Once the data was sorted it was displayed and summarized to determine products and chemical applications by years and totals for those years. Application acres were also noted and a per acre rate derived using the data.

The attached worksheet represents a summary of SPI's pesticide applications as set forth in the data received from the Portal. In addition, I have mailed a CD copy of the full data set from which I created this summary table to CAL FIRE as part of Ebbetts' Pass' comments.
